

PRIME CANON L LENSES FOCAL LENGTHS

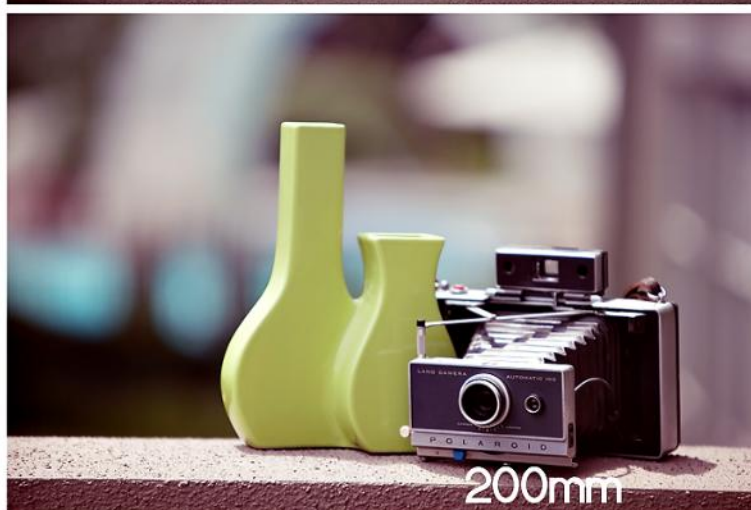

Prime lenses have a fixed focal length, meaning they do not zoom in or out. Prime lenses are great for portraiture because they allow for the most pristine quality. I try to stick with shooting with the primes as much as possible. Prime lenses are also great for shooting in low-light because they allow for a wider aperture.

CANON L ZOOM LENSES

Zoom lenses are great for situations where you can't physically get closer (i.e. ceremonies, ball games.) They are also great if you are in a place where you need to change quickly from wide to zoomed in. They are very versatile and good all around lenses.

my camera bag by Sarah Ainsworth

For those of you that may read my blog who are more interested in the technical side of photography, more so than just looking at the pictures, I really want to share some of what I have learned along the way with you! People often ask me what kind of equipment I use when shooting.....[Click for More](#)
